Ztnfr14 polynucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnf14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of human TNFR TACI. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the TNFR family.
                              New isolated transmembrane activator protein - used to develop products for treating e.g. infections, cancers, autoimmune and inflammatory conditions, transplant rejection or graft-versus-host disease.

Methods are claimed for identifying a ligand for TACI and for identifying immunosuppressive drugs that selectively block the action of B lymphocytes without affecting mature T lymphocytes. TACI can be activated to increase immune system activity, e.g. for treating infections or cancers. It can be blocked to provide immunosuppression, e.g. for treating autoimmune and inflammatory conditions such as immune complex- induced vasculitis, glomerulonephritis, haemolytic anaemia, myasthenia gravis, type II collagen-induced arthritis, experimental allergic and hyperacute expensively reserving the service constitution and the service conditions such as immune complex- induced vasculitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is the amino acid sequence of novel human transmembrane activator and CAML-interactor (TACI) protein, a lymphocyte receptor protein that is involved in the calcium activation pathway. TACI is normally present in B lymphocytes, and to a much lesser extent in immature T-lymphocytes, and can therefore be targetted to specifically regulate B cell responses without affecting T cell activity. TACI cDNA (seeV57328) was isolated from a B-lymphocyte cDNA library using a yeast two-hybrid assay. Also claimed are the C-terminal (see AAW75784) and N-terminal (see AAW75785)
                                                       useful for producing TR: diagnosis of autoimmune
                                                          Nucleic acid encoding a neutrokine-alpha receptor (NAR) such as useful for producing TR17 protein which is used in the treatment diagnosis of autoimmune and immunodeficiency disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic;

Claim 1; Fig 1; 398pp; English

The present sequence represents a human transmembrane activator and CAML-interactor (TACI) receptor. TACI is a tumour necrosis factor (TNF) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell protein) receptor contain a cysteine rich

```

TR17 has cytostatic, immunosuppressive, noutropic, neuroprotective, antiviral, antiallergic, hepatotropic, antidiabetic, antinflammatory, antiulcer, cardiant and ophthalmological activities and can be used in gene therapy. The TR17 protein and antibodies are useful for treating and diagnosing immunodeficiency disorders and autoimmune disorders. The TR17 polypeptides, polynucleotides, antibodies, agonists and/or antagonists are used for treating various other diseases defined in the specification and as research tools for studying the phenotypic effects that result from inhibiting TR17/TR17 ligand interactions on various cell types
                                                                                                             Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprise administering a BR43x2, TACI or BCMA extracellular domain polypeptid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               domain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TNF ligand. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, myasthemia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with asthma, bronchitis, emphysema, end stage renal failure, glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, inchrists, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft rejection, graft versus host disease, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint pain, swelling, anaemia, or septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human;

The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) and TALL and TNF receptor TACI or BCMA. The method is useful for treating pathological conditions to the second of the second
                                                                                                                                                                                                                                                                                                                      Inhibiting or neutralizing TALL-1 or APRIL polypeptide biological activity, for treating autoimmune disorders and cancer, comprises exposing the cells to TALL-1 or APRIL polypeptide agonists or

TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human TACI protein
                           The present sequence is a human tumour necrosis factor receptor (TACI) protein. TACI (Transmembrane activator and casisum-signal modulating cyclophilin ligand (CAML)-interactor) forms a complex with neutrokine alpha polypeptide (TACI-Ligand). The antagonist or agonist of TACI/TAC complex is useful for modulating an intracellular signalling cascade
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tumour necrosis factor receptor; TNF; autoimmune disease; diabetes; calcium-signal modulating cyclophilin ligand; CAML; viral infection; neutrokine alpha polypeptide; TACI-Ligand; TACI-L; cytostatic; therapy; neuroprotective; antidiabetic; antiviral; antiinflammatory; tumour; antiarthritic; antirheumatic; immunosuppressive; multiple sclerosis; rheumatoid arthritis; graft rejection; inflammation; cell proliferation; cell death; immunoglobulin E-mediated allergic reaction; IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human tumour necrosis factor receptor (TACI) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY71914 standard; protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used to inhibit the interaction between TACI and TACI-L for therapeutic purposes to treat tumour and tumour metastasis and to combat various autoimmune diseases e.g. multiple sclerosis and diabetes, as well as other disorders, such as viral infection, rheumatoid arthritis, graft rejection, and immunoglobulin (Ig) E-mediated allergic reactions and inflammation. The interaction is used to study cellular processes associated with tumour necrosis factor (TNF) receptors such as immune regulation, cell proliferation, cell death and inflammatory responses. The interaction between the extracellular region of TACI and TACI-L can be used to further develop understanding of which cell types TACI-L acts
                                                                                                 Treating mammal for condition associated with undesired cell proliferation e.g., solid tumor or reducing solid tumor size located in mammal comprises administering transmembrane activator CAML interactor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc tumour, or reducing the size of a solid tumour located on or in a mammal) comprising administering a transmembrane activator CAML interactor cc protein (TACI) reagent. The TACI reagent has cytostatic and vulnerary cc activity. Treating a mammal (e.g. human, cow, horse, dog, mouse, rat or cat) for a condition associated with undesired cell proliferation (e.g. cancer such as renal cell cancer, Kaposi's sarcoma, breast cancer, colon cancer, bladder cancer, mastocytoma, lung cancer, mammary adenocarcinoma, colon cancer, bladder cancer, mastocytoma, lung cancer, mammary adenocarcinoma, charyngeal squamous cell carcinoma, gastrointestinal cancer or stomach cancer). The method is also useful for treating cellular crime cc hyperproliferation (hyperplasia) such as scleroderma, pannus formation in crheumatoid arthritis, post-surgical scarring and lung, liver and uterine cf fibrosis. The TACI reagent of the invention can extend mean survival time of a mammal in cc the absence of administering the TACI reagent. The TACI reagent also creduces the size of the tumour by 25% or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 designated Ztnfr12 (1). (1) has cytostatic, immunosuppressive, CC dermatological, antiinflammatory, neuroprotective, antidiabetic, CC antitheumatic, antiarthritic, antiasthmatic, nephrotropic and hypotensive activities, and can be used in gene therapy. (1) can be used for CC inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 CC (e.g. ZTNF4), for treating disorders and diseases associated with B1 CC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC inhibiting the proliferation of tumour cells (1) is useful for treating CC autoimmune disorders such as systemic lupus erythematosus, myasthenia CC gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, remanded arthritis, bronchitis, emphysema and end stage renal failure cor renal disease such as glomerulonephritis, vasculitis, chronic lymphoid CC leukaemia, nephritis, and pyelonephritis, and for treating renal CC neoplasms, multiple myelomas, lymphomas, light chain neuropathy, or amyloidosis, hypertension, large vessel diseases, graft-versus host CC disease, graft rejection and Crohn's disease, (1) is useful for CC modulating the immune system, for regulating B cell responses and CC development, for modulating development of other cells, antibody communication. The present sequence represents a protein which is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

The proteins are also useful as a vaccine adjuvant that enhances immune responsiveness to specific antigens. The present sequence for human transmembrane activator and CAML-interactor (TACI)-immunoglobulin G (IgG) Fc fusion protein is used in the examples of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequences encoding them. The proteins are useful for modulating immunoglobulin production or for modulating proliferation of B-cells. The sequences of the invention are useful for treating diseases or disorders of the immune system. Such disorders include autoimmune diseases (e.g. systemic lupus erythematosus (SLE), acquired immunodeficiency syndrome (AIDS)), cancers of the immune system (e.g. chronic lymphocytic leukaemia (CLL), multiple myeloma, non-Hodgkin's lymphoma or Hodgkin's disease), lymphoproliferative disorders, microbial infections (e.g. viral, proposed the station of the second treating disorders, microbial infections (e.g. viral)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ű

The method involves using an antibody component that binds both the B-cell maturation antigen (BCMA) and the transmembrane activator and calcium-modulator and cyclophilin ligand-interactor (TACI). BCMA and TACI binding antibody compositions are useful for inhibiting proliferation of tumour cells, particularly inhibiting proliferation of tumour cells, particularly inhibiting production or a disorder consisting of neoplasm, chronic lymphocytic production or a disorder consisting of neoplasm, chronic lymphocytic and the constitution of the production of a disorder consisting of neoplasm, chronic lymphocytic and the constitution of the plasm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               B-cell maturation antigen and transmembrane activator and calcium-modulator and cyclophilin ligand-interactor, useful for treating disorders e.g. inflammation or lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAU75408 standard; protein;

CC are useful for modulating immunoglobulin production or proliferation of B CC cells. (I) or (II) is useful: for treating a disease or disorder of the CC immune system, preferably an autoimmune disease (e.g. Sjogren's syndrome, CC systemic lupus erythematosus or common variable immunodeficiency syndrome, CC cancer of the immune system (e.g. Hodgkin's disease, non-Hodgkin's CC cancer of the immune system (e.g. Hodgkin's disease, non-Hodgkin's CC lymphoma, multiple myeloma and chronic lymphocytic leukaemia (CLL); in CC the diagnosis and treatment or prevention of cancer, lymphoproliferative disorder, bacterial and viral infections, osteoporosis, atherosclerosis, CC pain, cardiovascular disorders (e.g. stroke), allergy, inflammation, CC neurodegenerative disease (e.g. Alzheimer's disease), liver disease (e.g. cirrhosis), cardiomyopathy, diabetes, asthma, psoriasis, septic shock, CC giomerulonephritis, ulcerative colitis, atteriosclerosis; for promoting angiogenesis and wound healing; as a diagnostic research reagent; as an agent to target and kill cells expressing a TNFdelta and/or TNFepsilon CC receptor; in apoptosis of transformed cell lines; mediation of cell activation and proliferation; and as an immunogen to produce (II). (II) is useful to purify, detect and target (I), for measuring levels of (I) in biological samples, for immunophenotyping samples, and to treat, CC inhibit or prevent diseases and disorders associated with aberrant CC expression and/or activity of (I). This is the amino acid sequence of a fusion protein of tumour necrosis factor receptor TACI and immunoglobulin (I) in protein of tumour necrosis factor receptor TACI and immunoglobulin (I) in the method of the

CC cytoplasmic domains by yeast two-hybrid screening process. (II) is convolved in B cell growth, survival and activation particularly in lymph conditions and appears and antagonists and antagonists and antagonists and antagonists are used for modulating B cell response and are considered to treat diseases characterised by inflammatory processes or const disease, Crohn's disease, hupus, etc. (II) is also useful in the constraint of hybridoma cells which are derived from B cells, which convolves treating the hybridoma cells which are derived from B cells, which convolves treating the hybridoma cells with (II). (II) is useful in the convolves treating the hybridoma cells with a cell convolves treating the hybridoma cells with the convolves treating acute pancreatities, anyotrophic lateral sclerosis carthritis, osteoarthritis, etc. (II), its agonists or antagonists are useful for treating acute pancreatitis, amyotrophic lateral sclerosis convolves, pancreatitis, anyotrophic lateral sclerosis. (ALS), Alzheimer's disease, asthma, atherosclerosis, cachexia/anorexia, collabetes, fever, glomerulonephritis, inflammatory bowel disease, collabetes, fever, glomerulonephritis, inflammatory bowel disease, multiple sclerosis, osteoporosis, parkinson's disease, pain, reperfusion injury, collapsed shock, etc. The nucleic acids are also useful for developing transgenic animals expressing (II), which are useful for producing the polypeptides and for the study of in vivo biological activity. The present reference represents the amino acid sequence of human AGP-3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a composition (I) comprising AGP-3 receptor (tumour necrosis factor ligand family member) related protein (II) attached to a vehicle protein. (I) is useful for modulating AGP-3-related activity in mesenteric lymph nodes (MLN) of a mammal. (II) is useful in assays to identify cells and tissues that express AGP-3R or proteins related to AGP-3R related protein and for identifying compounds (agonists or antagonists) that interact with AGP-3R proteins. (II) is also useful for identifying intracellular proteins that interact with the respective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumor necrosis factor ligand family member) receptor and encoding nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-049441/06

cc protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF Cf family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL BCMA and TACI attagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12-MAY-2000; 2000US-0204039P

systemic lipus erythematosus, B cell lymphoproliferative disorder, kappa chain deficiency, neuritis, restenosis and short limbed dwarfism, cancer, Crohn's disease, bronchitis, otitis media, sepsis, meningitis, ulcerative colitis and AIDS. The polypeptide is also useful for increasing or
                                                                                                                                                                                 The invention relates to a tumour necrosis factor (TNF) receptor polypeptide, TR17, and the polynucleotide encoding it. The polypeptide and polynucleotide are used for treating an immunodeficiency or an autoimmune condition. The disorders include haemolytic anaemia, dermatitis, myocarditis, glomerulonephritis, allergic encephalomyelitis, rheumatic heart disease, polyendocrinopathies, autoimmune pulmonary inflammation, multiple sclerosis, diabetes mellitus, asthma, vitiligo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tumor necrosis factor receptor polypeptide, useful e.g. for immunodeficiency, comprises a specific amino acid sequence, optionally a heterologous polypeptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       myocarditis; glomerulonephritis; allergic encephalomyelitis; vitiligo; rheumatic heart disease; polyendocrinopathy; diabetes mellitus; neurit autoimmune pulmonary inflammation; multiple sclerosis; asthma; hepatit cirrhosis; Sjogren's syndrome; rheumatoid arthritis; restenosis; AIDS; autoimmune thyroiditis; reticular dysgenesis; ataxia-telangiectasia; evetamic libris controller all lumphorolitis; ataxia-telangiectasia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                               antiallergic, antiasthmatic, neuroprotective, ophthalmological, tuberculostatic, antidiabetic, antipsoriatic, anti-HIV, antiarteriosclerotic, vasotropic, thyromimetic, and haemostatic activity. The antibody or its fragment are useful for treating, preventing or ameliorating cancer such as Non-Hodgkin's lymphoma or multiple myeloma in human, disease or disorder such as autoimmune disease, and graft versus
                                                                                                                                                                                                                                                                                                                                   Novel isolated antibody that immunospecifically binds tumor necrosis factor delta, useful for treating, preventing or ameliorating Non-Hodgkin's lymphoma, multiple myeloma, rheumatoid arthritis or Sjogren'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                dermatological; immunosuppressive; antiinflammatory; antirheumatic; antiarthritic; cytostatic; antianaemic; antiallergic; antiasthmatic; neuroprotective; ophthalmological; tuberculostatic; antidiabetic; antipsoriatic; anti-HIV; antiarteriosclerotic; vasotropic; thyromimetic; haemostatic; cancer; autoimmune disease; graft versus host disease; GVHD inflammatory disorder; proliferative disorder; single chain antibody; antibody; human; TACI; tumour necrosis factor.
               host disease (GVHD). The autoimmune disease is systemic lupus erythematosus, rheumatoid arthritis or Sjogren's syndrome. The antibod is useful for detecting, diagnosing, prognosing, treating, preventing ameliorating a disease or disorder associated with aberrant APRIL or APRIL receptor expression or aberrant function of APRIL or APRIL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorders such as autoimmune neutropenia, haemolytic anaemia, dermatitis, asthma, allergic encephalomyelitis, myocarditis, multiple sclerosis, uveitis, tuberculosis, diabetes mellitus, psoriasis, cancer of the immune system, particularly B cell cancers, immune disorders such as myasthenia gravis, Hashimoto's disease, immunodeficiency syndrome, Bruton's disease, infectious diseases (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. leukemia). The present sequence represents the tumour necrosis factor TACI
                                                                                                                                                                       The present sequence represents a human TACI polypeptide. The specification also describes BR3 polypeptides. TACI and BR3 are receptors. Tumour necrosis factor [TMF] family ligands TALL-1 also binds to bind to the TACI receptor, while TNFF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus
                                                                                                                     Sequence 293
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 293 AA;

                                                 the composition comprising the agonist or antagonist, is useful for CC treating or preventing obesity-related diseases, e.g. hyperlipidaemia, CC atherosclerosis, insulin resistance, diabetes, stroke or hypertension. CC The agonist is useful for reducing body mass and maintaining weight loss by: lowering circulating levels or concentrations of free fatty acids, CC glucose and/or triglycerides; stimulating muscle lipid or free fatty acid coxidation; increasing leptin uptake in a liver cell; reducing the cc postprandial increase in plasma free fatty acids or triglycerides, CC particularly following a high fat meal; reducing or eliminating ketone body production, particularly following a high fat meal; noreasing CC glucose uptake in skeletal muscle cells, adipose cells, neuronal cells, cred blood cells or brain; reducing or preventing the postprandial crincrease in plasma glucose following a high fat meal; or crease in plasma glucose following a high rearbohydrate meal; or crease in plasma glucose following a high carbohydrate meal; or crease in plasma glucose following a high carbohydrate meal; or consecuted with excessive weight loss, creating or preventing disorders associated with excessive weight loss, chronic inflammatory disease.

CC related weight loss, or anorexia. The present sequence is human DITACIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Metabolic disorder; DITACIN; obesity-related disease; hyperlipidaemia; antidepressant; chronic inflammatory disease; cachexia; immunomodulator; glucose uptake; insulin sensitivity; anorexia; cerebroprotective; AIDS; atherosclerosis; insulin resistance; diabetes; stroke; hypertension;
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to agonist or antagonist of DITACIN useful in the treatment of metabolic disorders. The antagonist or agonist of DITACIN or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New agonist and antagonist of DITACIN activity, useful for preventing or treating obesity-related diseases (e.g. hyperlipidemia or stroke), or increasing body mass (e.g. by treating excessive weight loss, cachexia),
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 33-34; 37pp; English.

                   and the polynucleotides encoding them. The sequences of the invention are useful in research, biological, clinical and therapeutic purposes. In particular, these are used in diagnosing, preventing, treating or ameliorating dystunctions or diseases associated with aberrant endogenous activity of TNF delta or epsilon, such as septic shock, inflammation, cancer, cerebral malaria, activation of HIV virus, bone resorption, rheumatoid arthritis, cachexia, Grave's disease, diabetes, hepatitis, asthma, cardiovascular disorders, infections, allergies, Alzheimer's disease, Parkinson's disease and nephritis. The sequences may also be used for chromosome identification or genetic mapping. This sequence represents a human TNF-related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     14-JUN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                          The invention relates to an isolated nucleic acid molecule consisting of CC a sequence that is at least 90% identical to a sequence encoding Human CC tumour necrosis factor receptor (TR20) polypeptide (appearing as CC ADP77377) or its fragments, complement, and optionally a heterologous nucleic acid sequence that is preferentially expressed in mature B cells. CC Also included are a method of making a recombinant vector by inserting CC the nucleic acid molecule into a vector, a recombinant vector produced by the method, a method of making a recombinant host cell by introducing the recombinant vector into a cell, a recombinant host cell by culturing CC method and a recombinant method of producing a polypeptide by culturing CC expressed and recovering the polypeptide. The nucleic acid molecules are CC upregulated cell proliferation, or inhibition of apoptosis, e.g. cancer, CC autoimmune diseases, viral infections, inflammation, graft versus-host CC disease, acute graft rejection, chronic graft rejection, AlDS, CC neurodegenerative disorders, myelodysplastic syndromes, ischaemic injury, to include for comparison with propo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; tumour necrosis factor receptor; TR20; receptor; gene therapy; B cell; cell survival; upregulated cell proliferation; apoptosis; cancer; autoimmune disease; viral infection; inflammation; graft-versus-host disease; acute graft rejection; formonic graft rejection; AIDS; neurodegenerative disorder; myelodysplastic syndromes; ischaemic injury; toxin-induced liver disease; myelodysplastic syndromes; ischaemic injury; toxin-induced liver disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New TR20 nucleic acid molecules, useful for treating diseases associated with increased cell survival, upregulated cell proliferation, or inhibition of appotosis, e.g. cancer, autoimmune diseases, viral infections, inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-MAY-2000; 2000US-0202193P

                                                                                                                                                                                                                                                                                      are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (ii) for screening of bioactive agent capable of a bioactive agent capable of modulating the activity of CAP; (1) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vi) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 293 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human protein sequence hCP45156

                                                                                                                                                                                                                    The present invention relates to an isolated monoclonal antibody which binds to a transmembrane activator of and CAML interactor (TACI) receptor. The TACI antibodies are useful for modulating TALL-1 or TACI polypeptide biological activity in mammalian cells, or for diagnosing and treating pathological conditions associated with TNF and TNF receptor-related molecules, e.g. cancer or immune-related disease, such as systemic lupus erythematosus, rheumatoid arthritis, Sjogren's syndrome, systemic vasculitis, diabetes mellitus, Crohn's disease, glomerulonephritis, multiple sclerosis, psoriasis, asthma, urticaria or infections diseases including AIDS, hepatitis infection, bacterial infection, fungal infection, protozoal infection and parasitic infection. The present sequence represents native human TACI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New anti-TACI receptor monoclonal antibody, useful for diagnosing and treating pathological conditions associated with tumor necrosis factor, e.g. cancer or immune-related disease, such as rheumatoid arthritis or psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CAML interactor receptor; TACI; Cytostatic; Antiinflammatory; Dermatological; Immunosuppressive; Antirheumatic; Antiarthritic; Antidiabetic; Neuroprotective; Antiasthmatic; Antiallergic; Anti-HIV; Antibacterial; antiparasitic; systemic lupus erythematosus;
